

Annex 3

Table 1. Treatments assayed in the first laboratory experiment

Nomenclature	Treatment description
T	Without treatment (<i>natural attenuation</i>)
TA	Mechanical aeration
TAN	Mechanical aeration + nutrients in a molar concentration ratio: 100C:10N:1P in regard to TOC soil
TAME	Mechanical aeration + microorganisms and enzyme inoculation
TAC	Mechanical aeration + sewage sludge compost

Table 2. Treatments assayed in the second laboratory experiment

Nomenclature	Treatment description
T	Without treatment (<i>natural attenuation</i>)
TA	Mechanical aeration
TZ	Zeolite addition (30%)
TAZ	Mechanical aeration + Zeolite addition (30%)

Figures 1 and 2. Microcosms prior to OOMW contamination and after 15 days of pre-incubation (16 February).

Figures 3 and 4. Microcosms just after contamination with the OOMW.

Figures 5 and 6. Microcosms 2 days after OMWW contamination. Fungi growth is observed in microcosms with OMWW addition.

Figures 7 and 8. Microcosms 2 weeks after OOMW contamination in the incubation for assaying the effect of a zeolite. Fungi growth is observed in microcosms with OOMW addition.
